

AQUAMED

The future of research on aquaculture in the Mediterranean region

Work package 7. Research needs and structural recommendations

Objectives:

The WP7 will identify the research needs and formulate recommendations in order to improve the efficiency of the research sector, first at the country level, then at the Mediterranean level.

Under the general objectives of facilitating the future programming of research at national, EU and Regional levels and technology development activities, this WP will focus on identifying research needs and proposals for structuring the research sector in Mediterranean Aquaculture, likely to opening the opportunity for an ERANET like process. The WP7 will identify the main shortcomings and overlaps in research resources and will propose tools and recommendations to improve the efficiency of e.g. the European research system through improved coordination and integration of research resources and activities.

Approach:

Collective synthesis for identification of the research needs necessary to overcome the constraints identified in WP6 (group of country level). Analysis and recommendations at Mediterranean level to be discussed and validated during a project meeting (Event 6).

Expected impact:

To provide an overview on research needs in the Mediterranean and recommendations to meet them.
